Technical Support / Incident analyst

About me

I am a responsible person with analytical and logical thinking, adaptable to various work environments. I have the ability to quickly learn new techniques and tools, including specialized software, and I am open to change and continuous development. I work efficiently both individually and as part of a team, demonstrating flexibility, kindness, and a constant desire to improve my personal and professional skills.

On a personal level, in my free time, I expand my programming knowledge, particularly in PHP, Laravel, HTML, CSS, JavaScript, and MySQL. I continuously engage in projects to apply my knowledge and enhance my problem-solving abilities.

In my professional experience, I have gained experience in troubleshooting, application maintenance, and system administration. I have worked on analyzing and resolving technical issues through log investigation, ticket management, and collaboration with cross-functional teams to provide solutions. I am experienced in using tools such as Jira and Confluence for incident tracking and project management, ensuring smooth communication and workflow. Additionally, I am skilled in system monitoring with tools like Grafana and have experience in cloud technologies such as Google Cloud and Linux systems administration.

My ability to prioritize tasks and manage workloads based on urgency ensures timely problem resolution and system reliability. I also take part in the continuous improvement of services, identifying potential solutions for recurring problems, and testing them to enhance overall system performance.

Work experience

Incident analyst · Stefanini

July 2022 - Present · 2 years 6 months

Investigating application logs to identify the issue that led to the creation of the ticket.

Reporting, prioritizing, and resolving issues identified from the log investigation. Escalating issues when necessary.

Participating in the analysis, testing, and resolution of major incidents.
